Sl	8
Wh	9

Resistor Values:
3 or 4 bands grouped to one side of package. Band on the inside is multiplier (# of zeros)

Tolerance:
Silver 10%
Gold 5%
Red 2%
Brown 1%

Ohm's Law:

$$I = \frac{V}{R}$$

milli (m): 0.001
micro (μ): 0.000 001
nano (n): 0.000 000 001
pico (p): 0.000 000 000 001

Surface Mount Resistor Codes:

Two common tolerances: three (5%) or four (1%) digits. Last digit is the multiplier.

R is used to mark a decimal point (no multiplier).

Three Digit Capacitor Codes:

Value in Pico-Farads

Third digit:
0-5 = multiplier
8 = 0.01
9 = 0.1

Power Equation:

$$\text{Watts} = \frac{\text{Volts}^2}{\text{Ohms}}$$
